THE COUNTERFACTUAL CITY

PUBLIC RELEASE 2.1 / PROGRAMMING PUZZLE

## Build a causal evaluator. Debug tomorrow.

At midnight, a city receives a complete record of tomorrow's disasters. Build the engine that opens it, repair the smallest causes, and discover who decided that tomorrow was allowed to have only one history.

75

SCORED CASES

10,000

NOMINAL POINTS

8

PROBLEM FAMILIES

4

PRESENTATION LANGUAGES

### One city, eight ways to reason

**ORIENT** — learn the record and witness loop

**CASCADE** — change the smallest cause

**MERGE** — reconstruct conflicting histories

**PULSE** — program bounded event streams

**MOSAIC** — rebuild supported topology

**LENS** — synchronize without forgetting

**COVENANT** — prove local policies globally

**PARADOX** — audit uniqueness

Two distinct causal histories.  
One official public record.
